Shreyas Shinde

Backend & DevOps Engineer

Pune, India — shreyas.stark24@gmail.com — linkedin.com/in/shreyas-shinde-a04530258 — github.com/00-Shreyas-00

Professional Summary

Backend and DevOps Engineer with hands-on experience building cloud infrastructure, CI/CD pipelines, and containerized microservices using Python, AWS, Docker, and Kubernetes. Skilled in Infrastructure as Code (Terraform), GitOps automation, and MLOps workflows, with a track record of reducing deployment times and improving system reliability.

Technical Skills

Languages: Python, SQL, Bash, JavaScript, Node.js, Typescript
Backend Development: Express, FastAPI, REST APIs, API Integration, Authentication, Logging, WebSockets
DevOps & CI/CD: Kubernetes, Kind, kubeadm, GitOps, Docker, Docker Compose, GitLab CI/CD, GitHub Actions, Jenkins, SonarQube, Self-Hosted Runners
Cloud & Infrastructure: AWS (EC2, VPC, Subnets, Route Tables, Internet Gateway, NAT Gateway, IAM, S3, Lambda, ALB, ASG, CloudFormation, EKS), Terraform, Linux, Shell Scripting, Networking
Data Engineering: ETL Pipelines, Apache Airflow, Pandas, Data Cleaning, Data Modeling
Databases: MySQL, PostgreSQL, MongoDB
MLOps: MLflow, DVC, Model Deployment, CloudWatch Monitoring, Serverless Architectures
Version Control: Git, GitHub, GitLab

Professional Experience

SDE Intern — Virasaa Techlabs *Jan 2026 – Present*

- Developed and optimized Python scripts and high-performance REST APIs designed for seamless integration and low-latency execution within Android mobile applications.
- Engineered an extensive CI/CD automation pipeline using GitLab CI/CD to handle automated unit testing, code quality checks, and multi-stage Docker image building.
- Accelerated software delivery cycles by automating manual regression testing, significantly reducing overall QA turnaround time and improving development team velocity.

Projects

AWS Multi-Tier Infrastructure and CI/CD Automation *Terraform, AWS, Docker, GitLab CI/CD*

- Provisioned cloud infrastructure using Terraform, automating deployment of a custom VPC, public/private subnets, route tables, Internet Gateway, NAT Gateway, EC2 instances, and Security Groups.
- Designed a secure multi-tier architecture by isolating the MongoDB database in a private subnet and enforcing source-restricted communication between application and database layers.
- Configured a self-hosted GitLab Runner on AWS EC2 and built a multi-stage CI/CD pipeline covering testing, Docker image builds, and automated deployments, eliminating manual release steps via SSH-based automation.

Multi-User Real-Time Chat Application & Hybrid GitOps Pipeline *Kubernetes, GitLab CI/CD, Node.js*

- Developed a full-stack microservices chat application with decoupled React frontends, Node.js API gateways, and a stateful MySQL replica layer supporting 500+ concurrent WebSocket connections.
- Optimized container footprints by 60% using multi-stage Docker builds, reducing image sizes to under 120MB and accelerating pod pull-to-ready times during cluster scaling.
- Implemented Kubernetes ConfigMaps and encrypted Secrets to eliminate plaintext environment variables, and configured rolling updates with readiness/liveness probes for zero-downtime deployments (under 50ms latency variance).

Education

B.E. in Artificial Intelligence & Data Science *June 2022 – June 2026*
Ajeenkya DY Patil School of Engineering, Pune — GPA: 7.8/10

Certifications

- Complete MLOps Bootcamp With 10+ End-to-End ML Projects — Udemy
- AWS Cloud Practitioner (2025) — Cloud fundamentals, EC2, S3, IAM, deployment and billing
